Home and building automation system

Fieldbuses

Home and building automation system

Home automation today is a lot more than lighting control, it is a way to make the home something special, taking care of the owners and their loved ones. Like a person, a smart house can change over time, following evolving needs and moods, easily adapting itself to new solutions. Furthermore, the technology in the house improves wellbeing, comfort, security, energy saving and much more.

The new smart-house system by Carlo Gavazzi offers this new way of living to its customers: let's discover all the advantages and applications!

A dynamic and evolving system

With its new smart-house system, Carlo Gavazzi delivers a new way of designing a house or a building, thanks to its flexibility and modularity.

It is based on a patented digital bus, the two-wire Dupline® bus, very powerful in transmitting all the information needed in building automation. Thanks to the bus concept, the system can be expanded at any time without important structural changes in the installation and with excellent management of the costs. Furthermore, the functions can be changed and/or updated very easily by means of a software at any time and from anywhere, also remotely. Thanks to this, the smart-house system is always alive, dynamic, and easily adapted to the evolving requirements of the home owner and to the fast -progressing world of high technology. The smart-house system delivers complete solutions for home automation, including lighting scenarios to select the best ambience, shutter control to regulate perfect light and shade, temperature management to combine optimum comfort with optimum efficiency, intrusion, flooding and smoke monitoring to protect from any burglary or damage to the house, a scheduler to program all events and basic functions. All this creates very special automation. The system also includes energy monitoring, logging power, water and gas consumption and whatever information is present on the bus (temperatures, humidity, light level, ….). All this data is available on graphs, just by using a smart device or a PC, thanks to the embedded webserver. Moreover, the system is an open platform designed for easy and fast integration with products from other companies, since we use protocols based on TCP/IP, for which we deliver the complete documentation.

CARLO GAVAZZI Automation Components. Specifications are subject to change without notice. Illustrations are for example only.

Fast commissioning without any addressing

One of the most innovative features is that no addressing of modules is needed: the installer just has to mount all the modules, launch a network scan and the system will find and automatically recognise the connected devices without the need to go around the whole installation making association or addressing. This means time and cost savings and an error free configuration process.

Diagnostic function for easier troubleshooting

If any trouble should occur, the system provides powerful diagnostic functions in order to make the fault finding much easier: the bus is always monitored, giving information about shortcircuits, bus voltage and bus load, noise level and quality of the bus signals. The presence of the programmed devices is always monitored in order to give an immediate message if one is faulty. All this information is logged in a file so that the installer can check at any time what is happening.

State of the art software to guide users

The configuration of the system is easily carried out with the free SH tool that is downloadable from the Carlo Gavazzi website. The software has been developed using a state of the art concept in order to have a user friendly interface that guides the user in a fast and error free system configuration. At the same time, thanks to many basic functions, the most skilled user can also create customised applications. Furthermore, the SH tool has many debug features to make testing easier .

Brain and communication

SH2WEB24: the controller

The smart-house system is based on a central CPU, the SH2WEB24, a Linux based embedded PC that manages all the smart functions. It is programmed by means of powerful software, the SH tool. The SH2WEB24 has the Ethernet communication capability to be remotely controlled and monitored by smart-devices/PCs; it is also a datalogger that can record any value/ event coming from the many buses it can connect to (Wireless and Dupline® buses, two RS485 ports, Ethernet). This master unit is also provided with an sd-card and USB port to upload/download data and system configurations

Fast commissioning

The innovative concept of the local bus makes commissioning very easy, fast and error free: the installer only has to plug the DIN modules next to one another without wiring any bus cable in the cabinet, saving time and drastically reducing installation costs.
The wiring of the decentralised modules such as light switches, movement sensors, etc is also made very straightforward   thanks to the screwless and detachable connectors: wires only need to be plugged in and everything is done!

CARLO GAVAZZI Automation Components. Specifications are subject to change without notice. Illustrations are for example only.

The heart

If the SH2WEB24 is the brain of the smart-house system, the two bus generators are the pulsating heart that makes all the information flow. They are connected to the SH2WEB24 via the high speed bus that is present both on the local bus and on the terminals at the bottom. This means that the connection is very fast and easy in a cabinet, since the modules only have to be plugged together without any wiring, and at the same time it is very straightforward if the bus generators have to be mounted in different cabinets. Up to 7 bus generators can be connected to one SH2WEB24.

SH2MCG24: the wired smart Dupline® bus generator

The SH2MCG24 is the smart Dupline® bus generator that enables the Dupline® bus to communicate with the local bus and with the terminals at the top. Thanks to this the DIN-rail slave modules (dimmers, relays, rollerblind modules, etc…) can just be plugged into the SH2MCG24, without the need for any wiring.

The decentralised modules, such as light switches, PIR sensors, temperature display, …are connected to the SH2MCG24 by the two wires coming from the Dupline® terminals at the top. Up to 250 modules can be connected to one SH2MCG24.

SH2WBU230N: the wireless wiDup bus generator

The smart-house system also provides a solution for when it is not possible to use wires. The SH2WBU230N is the wireless bus generator that can control wireless light switches and output relay modules. The wireless bus is based on the standard IEEE 802.15.4 @2.4Ghz. Up to 250 modules can be managed

by one SH2WBU230N. The open space operating distance is 700m.

Home and building automation system

Lighting and scenario

The user can program a very simple on/off light, create automation to save energy, or define scenarios for any and every situation or mood.
The automation can utilise movement/presence sensors which make the light switch on only when it is really needed.

It can also be managed by lux sensors which allow the light to be on only if the ambient light is below a predefined level. It can also enrich offices with a constant light feature.
Furthermore, the light can be turned on/off at predefined hours with

the scheduler and managed with a timer suited to every situation (stairs, wardrobe, corridors,…).
And of course it can all be managed remotely with a smart device.

———: 230VAC power supply

Temperature control

The temperature control function has been developed to suit the needs of both small homes and big buildings thanks to the management of independent zones.
The number of zones can be from one to virtually infinite, since they are programmed via software.

The heating and cooling control can be used on all types of systems (floor systems, radiators, fan coils, …) and it is based on a PID algorithm.
Each zone can manage up to three different setpoints to find the best temperature in each situation (comfort, activity, economy) in order to have

very efficient temperature control. The selection of the three setpoints is managed by a powerful calendar. The temperature sensor can also be integrated into the light switches, providing an invisible solution. Temperatures and setpoints are, of course, accessible using smart-devices.

Home and building automation system

Alarms: intruder, smoke and water leakage

The intruder alarm function advises the home owner about an intrusion attempt by sending an email, sms, or activating a siren output. It can also be monitored by mobile phones, tablet PCs and PCs. It is managed by zones, giving the maximum flexibility in installations with floors or where predefined areas have special access. It can be activated by a code, using the keypad or a smart-device.

The smoke alarm function detects the presence of smoke, activating a siren and advising the user by sms, email or the webserver.

The water leakage alarm function detects the presence of leaking water and can accordingly close the relevant electro-valve.

Like the other two alarms, this function can be controlled and monitored remotely via the webserver, with the maximum simplicity and reliability.

| **4** | Junction box | —— : Dupline® BUS | —— : 12VDC power supply |

Shade control

The rollerblind and window control functions manage AC and DC motor control of shade and window opening/closing.

The user can move these manually, using the same kind of switches as are used for light, or have them automatically moved according to predefined light levels, rain and wind presence, temperatures and the scheduler.

The smart-house system also manages curtains with tilting flaps in a very efficient way.

The blinds and windows can be controlled individually or by group: this choice can be defined once the installation is finished and at any time later.

Like all the other smart-house functions, this one can also be monitored and controlled remotely via smart-devices.

Home and building automation system

Sequences: one click to do many things

Sequences is a powerful tool offered by the smart-house system: the user can put together the functions already created to activate/deactivate them with just one click. For example, when the home owner activates the "Good bye" sequence when exiting his house, the intruder alarm is activated, all the lights are switched off, all the blinds go down and the temperatures are set to the economy level. In the same way, when he comes back home, by activating the "Welcome" sequence all the required lights are switched on, the blinds go up, soft music or the television can be turned on, and so on … there are no limits to the possibilities offered by the smart-house system.

Waking up in the morning can be programmed to be very gentle in a smart-house: the blinds go up to a predefined level very slowly so that the light intensity is not too strong, soft music starts and the temperature is programmed to reach the comfort level required.

| 4 | a: Cabinet b: Junction box | — : Dupline® BUS | — : Load control |

CARLO GAVAZZI Automation Components. Specifications are subject to change without notice. Illustrations are for example only.

Energy monitoring and data logging

The smart-house system reads and logs the electrical values and displays them in graphics, comparing them with the previous day, or presents them in downloadable excel and csv files.
The reading can be done using:
• Any Modbus device (e.g. meters, analysers, fan coils, heat pumps,…).
• The Dupline® output modules with energy reading capability (dimmer module, DIN-rail relay module and wireless relay output module): the information is sent via the Dupline® bus.

• The Dupline® DIN-rail pulse counter connected to an energy meter: the information is sent via the Dupline® bus.
At the same time, the installer can create simple logic to switch the loads off automatically if the consumed power exceeds the pre-set threshold, or they can be activated only according to a defined time table at cheaper electricity tariffs.
In the same user friendly format, the home owner can also view the consumption of gas and water.

As with all the electrical values, the smart-house system can log any analogue value and present it in graphs.
The graphs and instant values can be seen by using smart-devices such as mobile phones, tablets, PCs.

Home and building automation system

Diagnostic function

The smart-house system provides information about its working status and makes it available by using the SH tool and the webserver.

During commissioning, the installer is always aware of the working status of the smart Dupline® bus, since the bus voltage, bus load and short-circuit are monitored, as well as the quality of the signal: thanks to this, if any fault should occur, the installer will be informed without going all around the installation to look for it, thus saving time and money.

At the same time, each module is monitored to check if it is alive, working well and without any alarm/warning message such as over current, over voltage or over temperature, and the result is always available via smart-devices, so that the home owner can also be alerted in advance if any fault is going to occur.

The smart-house also advises if a lamp or, in general a load , is broken or not working anymore, reminding the user to change or repair it.

All the diagnostic events are logged in a file that can be accessed locally or remotely, providing the installer with a way to look into the problem even if it occurred in the past.
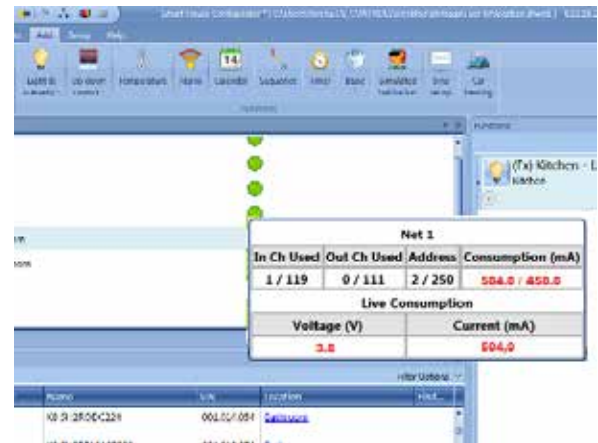

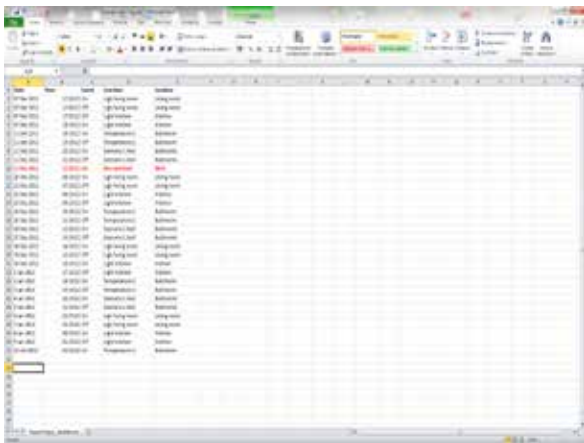

SmartHub: the touch display

In the living room or at the entrance, the SmartHub display is the ideal solution to control a smart-house with a finger touch. It is connected to the SH2WEB24 master unit via Ethernet and it is configured by the easy-to-use Wizard software, which automatically reads the Modbus TCP/IP variables of the smart-house master unit and assists the installer in creating the user interface with a comprehensive object library and templates. All the smart-house functions such as lights, scenario, light and shade, alarms, temperatures, …can be controlled by the SmartHub. It can also be linked to external monitoring systems, such as surveillance IP cameras, to monitor parts of a building directly from the touch panel. Furthermore, audio/video systems with Modbus TCP/IP capability can be connected to control music and entertainment.

CARLO GAVAZZI Automation Components. Specifications are subject to change without notice. Illustrations are for example only.

SH tool: the configuration software

The master unit is programmed by means of the configuration software SH tool, downloadable free from the Carlo Gavazzi website. The SH software has been developed to make commissioning fast, easy and error free: the wizard tool guides the user step by step in the creation of predefined functions. As soon as the software is connected to a master unit, it scans the network and finds all the connected modules. Thanks to this feature, the installer doesn't have to worry about any addressing of the modules, since it is done automatically, saving a lot of time and drastically reducing the numbers of errors. In a very intuitive way, the user can create a map of the installation where he will place the required modules and create all the automation, either with predefined functions or by using special logic with the basic functions.
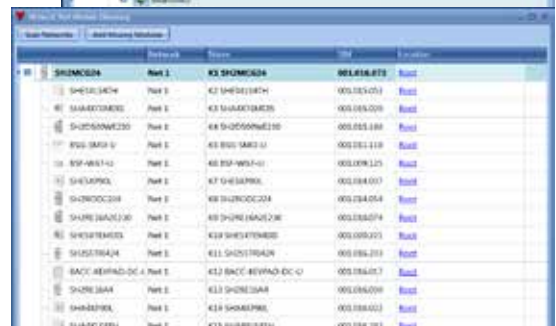

Create a "tree" map of the installation.

1
Add all the installed modules with an automatic network scan.

2

Create your functions in a very simple way by means of the wizard tool.

3

Download the configuration locally and remotely into the master unit SH2WEB24.

4
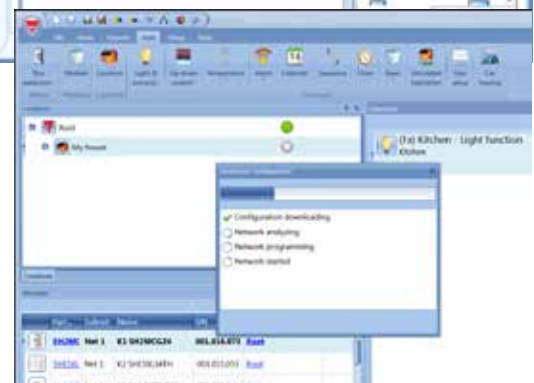

Done!

Home and building automation system

	Module type	Power supply	Main features
SHA4XWLS4	Black/White light switch	Battery	44x44; 4 push buttons; LED indication; wall box Bticino, Niko and Fuga
SHE5XWLS4	Black/White light switch	Battery	55x55; 4 push buttons; LED indication; wall box Elko, Gira and Jung
SHE5XWLS4BF	Black flat light switch	Battery	55x55; 4 push buttons; LED indication; wall box Elko and Gira
SHE5XWLS4BFT	Black flat light switch and temperature sensor	Battery	55x55; 4 push buttons; LED indication; wall box Elko and Gira
SHE5XWLS4WF	White flat light switch	Battery	55x55; 4 push buttons; LED indication; wall box Elko and Gira
SHE5XWLS4WFT	White flat light switch and temperature sensor	Battery	55x55; 4 push buttons; LED indication; wall box Elko and Gira
SHJWD200WEWLS230	White dimmer, light switch and energy meter	230 Vac	Dimmer with integrated energy meter and 2 white pushbuttons, for Bticino frame
SHJWD200WEBLS230	Black dimmer, light switch and energy meter	230 Vac	Dimmer with integrated energy meter and 2 black pushbuttons, for Bticino frame
SHJWD200WE115	Dimmer and energy meter	115 Vac	Dimmer with integrated energy meter to be mounted into eurobox
SHJWD200WE230	Dimmer and energy meter	230 Vac	Dimmer with integrated energy meter to be mounted into eurobox
SHJWEM16A115	Energy meter	115 Vac	Energy meter to be mounted into eurobox
SHJWEM16A230	Energy meter	230 Vac	Energy meter to be mounted into eurobox
SHJWRE10AEWLS230	White relay, light switch and energy meter	230 Vac	Relay with integrated energy meter and 2 white pushbuttons, for Bticino frame
SHJWRE10AEBLS230	Black relay, light switch and energy meter	230 Vac	Relay with integrated energy meter and 2 black pushbuttons, for Bticino frame
SHJWRE10AE115	Relay and energy meter	115 Vac	Relay with integrated energy meter to be mounted into eurobox
SHJWRE10AE230	Relay and energy meter	230 Vac	Relay with integrated energy meter to be mounted into eurobox
SHDWWISEN	Window sensor	Battery	Door/window opening detected through sensor's body and a magnet separation
SHDWWISENIN1	Window sensor	Battery	Door/window opening detected through sensor's body and a magnet separation with addition voltage free input

DALI

	Mounting	Power supply	Main features
SB2DALI230	DIN rail (2 modules)	230 Vac	DALI master and power supply to control up to 64 ballasts

CARLO GAVAZZI Automation Components. Specifications are subject to change without notice. Illustrations are for example only.

Smart Dupline® Repeater

		Mounting	Power supply	Main features
	SB2REP230	DIN rail (2 modules)	230 Vac	Smart Dupline® signal repeater that regenerates Dupline® signal and boosts power to extend the network lenght

Bus Generators

		Mounting	Power supply	Main features
	SH2MCG24	DIN rail (2 modules)	24 Vdc ±20%	Smart Dupline® bus generator, up to 250 slave modules can be connected
	SH2WBU230N	DIN rail (2 modules)	24 Vdc +/-20% 115-240 Vac 50/60 Hz +/-10%	Wireless bus generator, up to 250 slave modules can be connected, based on IEEE EEE 802.15.4, @ 2.4 GHz
	SH2DUG24	DIN rail (2 modules)	24 Vdc ±20%	Dupline generator for BH8-CTRLx compatibility

Controllers (CPU)

		Mounting	Power supply	Main features
	SH2WEB24	DIN rail (2 modules)	24 Vdc ±20%	Home automation controller with datalogging capability. Linux based PC with 2 USB ports, Ethernet port, 2 RS485 ports, local bus
	SB2WEB24	DIN rail (2 modules)	24 Vdc ±20%	Building automation controller with datalogging capability and Bacnet. Linux based PC with 2 USB ports, Ethernet port, 2 RS485 ports, local bus

USB Adaptor for dongle modem

		Mounting	Power supply	Main features
	SH2DSP24	DIN rail (2 modules)	24 Vdc ±20%	For USB dongle modem D-Link DWM 156 and 157, Huawey MS2131
	HUAWEIMS2131	USB port	By SH2DSP24	USB 3G DONGLE MODEM
	SH-MODEMKIT	-	-	Kit including SH2DSP24 and HUAWEIMS2131

Touch Display

		Dimension (mm)	Power supply	Main features
	BTM-T7-24	187x147x47	24 Vdc ±20%	Windows CE, 7'', 800 x 480 pixel, Ethernet port
	BTM-T4-24	147x107x56	24 Vdc ±20%	Windows CE, 4.3'', 480 x 272 pixel, Ethernet port

CARLO GAVAZZI Automation Components. Specifications are subject to change without notice. Illustrations are for example only.
